Jakarta, Indonesia

Re: [Position] Application

Dear Hiring Team,

I am writing to express my strong interest in the [Position] role at [Company]. With 14 years of progressive experience in IT management, project delivery, and product leadership, I bring a proven track record of building and leading high-performing teams, delivering complex technology projects end-to-end, and bridging the gap between business objectives and technical execution.

Throughout my career, I have operated across the full spectrum of IT delivery — from hands-on system development in my early years to strategic IT management and product leadership. Most recently, as IT Manager and Product & Tech Lead at PT Lakuemas Indonesia (a regulated fintech platform with 600,000+ active customers), I led end-to-end delivery of a mobile payment application (iOS & Android), managed direct integrations with banking partners including Bank Neo Commerce and Bank Mayapada, rebuilt the entire IT team from scratch after inheriting zero documentation, and reduced management reporting time by 40% through dashboard and automation initiatives — all while keeping a live financial platform running without disruption.

Prior to this, I led a 6-module SAP S/4HANA implementation (MM, PP, SD, HCM, CO, FA) across three retail brands under PT Central Mega Kencana Group — managing 20+ key users, coordinating cross-functional teams, and building a custom integration layer between SAP and existing legacy manufacturing systems. Before that, I spent five years independently designing and building end-to-end ERP modules from scratch covering Procurement, General Ledger, and unified management reporting across multiple business divisions.

What sets me apart is the combination of deep technical roots and strong leadership capability. I understand how systems work at the code level, which makes me a more effective manager, communicator, and decision-maker when working alongside engineering teams and business stakeholders. I am also an active AI practitioner — currently building AI-assisted internal tools and applying AI workflows in my day-to-day work — which I believe is increasingly essential for any IT leader operating in today's environment.

I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for your time and consideration.

Warm regards,

Andika Chun
